Germany to close all 84 of its coal-fired power plants, will rely primarily on renewable energy

Germany to close all 84 of its coal-fired power plants, will rely primarily on renewable energy

Germany, one of the world's biggest consumers of coal, will shut down all 84 of its coal-fired power plants over the next 19 years to meet its international commitments in the fight against climate change, a government commission said Saturday.

The announcement marked a significant shift for Europe's largest country — a nation that had long been a leader on cutting CO<sub>2</sub> emissions before turning into a laggard in recent years and badly missing its reduction targets. Coal plants account for 40% of Germany's electricity, itself a reduction from recent years when coal dominated power production.

"This is an historic accomplishment," said Ronald Pofalla, chairman of the 28-member government commission, at a news conference in Berlin following a marathon 21-hour negotiating session that concluded at 6 a.m. Saturday. The breakthrough ended seven months of wrangling. "It was anything but a sure thing. But we did it," Pofalla said. "There won't be any more coal-burning plants in Germany by 2038."

The plan includes some \$45 billion in spending to mitigate the pain in coal regions. The commission's recommendations are expected to be adopted by Chancellor Angela Merkel's government.

"It's a big moment for climate policy in Germany that could make the country a leader once again in fighting climate change," said Claudia Kemfert, professor for energy economics at the DIW Berlin, the German Institute for Economic Research. "It's a historic moment for Germany and for the world."

## 2 Getting Started

### Install Package

#### Instructions

#### Package

1. **Read** the Readme.md file.
2. **Confirm** Operating System and disk space requirements are met by looking at readme.md in the Git repository.
3. **Download** from the repository at <https://github.com/MQ-FOAR705/Osmond-Chiu—Proof-of-Concept—Implementation.git>.
4. **Open** Zip File.
5. **Control**-click the RBTools package in unzipped folder then select open to begin installation and bypass any security settings that may prevent the file from running
6. **Read** these instructions.

## 3 Zotero

### 3.1 Setup

### Complete Installation

#### Instructions

#### Zotero

1. **Check** that Zotero installation file has been mounted if installation does not automatically pop-up.
2. **Drag** the Zotero icon to 'Drag here to install'.
3. **Complete** Zotero installation.

### Create account

#### Instructions

#### Zotero

1. **Open** browser.
2. **Go to** <https://www.zotero.org/user/login> .
3. **Click** Register for a Free Account.
4. **Choose** the username and email address you want to use for the account.
5. **Click** Register and you'll receive a confirmation email shortly.
6. **Click** on the link in the confirmation email you receive to confirm your account set up.

## Sync account

### Instructions

#### Zotero

1. **Open** Zotero.
2. **Open** Preferences (via the Zotero menu) and select the Sync tab.
3. **Enter** your Zotero user name and password.
4. **Click** set up syncing.
5. **Check** both boxes under File Syncing and choose Zotero storage for My Library.
6. **Close** Preferences.
7. **Import** relevant file or add item from identifiers to add references.
8. **Click** the green circular arrow button at the top right corner of the Zotero program window to sync account with software.

## 3.2 Using Zotero With Other Programs

### Link Zotero to Overleaf

#### Instructions

#### Zotero

#### Overleaf

1. **Open** Zotero
2. **Open** Preferences (via the Zotero menu) and select the Sync tab.
3. **Enter** your Zotero user name and password.
4. **Close** Preferences.
5. **Click** the green circular arrow button at the top right corner of the Zotero program window to sync account with software.
6. **Go to** <https://www.overleaf.com/>.
7. **Register** an Overleaf account if you do not already have one.
8. **Log** into Overleaf
9. **Click** on Account then Account Settings.
10. **Scroll** down the page to Zotero Integration.
11. **Click** on 'Link to Zotero' and you will be prompted to log into Zotero.org
12. **Enter** Zotero username and password.
13. **Create** a New Private Key.
14. **Click** on Accept Defaults and you will be automatically returned to your Overleaf account settings page.
15. **Scroll** down to the bottom of the page to check Zotero Integration.

## Import references

### Instructions

#### Zotero

#### Overleaf

1. **Go** to Overleaf.
2. **Select** the project that you want to link to Zotero.
3. **Select** New File from the top menu.
4. **Select** 'From Zotero', name the file for the project and choose a format (BibLaTeX).
5. **Go** to main.tex file and add your Zotero file (as a bib resource) to header with the codes

```
\usepackage{biblatex} and \bibliography{name_of_file.bib}
```

## Insert references

### Instructions

#### Zotero

#### Overleaf

1. **Select** where you want to place the reference in the text.
2. **Write** /cite then enter in citation.

## Generate bibliography

### Instructions

#### Zotero

#### Overleaf

1. **Select** where you want to place the bibliography in the text.
2. **Insert** your bibliography by typing into the source code

```
/printbibliography
```

## 4 Hypothes.is

### 4.1 Setup

#### Create account

##### Instructions

##### Hypothes.is

1. **Open** browser
2. **Go to** [hypothes.is/signup](https://hypothes.is/signup).
3. **Choose** a username, enter your email address, and create a password.
4. **Click** Sign Up and you will receive a confirmation email to activate your account.
5. **Click** the link in the email received to validate your email and activate your Hypothes.is account.

#### Add Chrome Extension

##### Instructions

##### Hypothes.is

1. **Go to** [web.hypothes.is/start](https://web.hypothes.is/start).
2. **Click** add-on for Chrome.
3. **Accept** the prompt in the pop up window to install the extension.
4. **Consider** adding a bookmarklet if you do not have/use Chrome.

#### Add Bookmarklet

##### Instructions

##### Hypothes.is

1. **Go to** [web.hypothes.is/start](https://web.hypothes.is/start).
2. **Drag** 'Hypothesis Bookmarklet' to the bookmarks bar, or right-click/control-click to bookmark the link.

## 4.2 Using Hypothes.is

### Create tag hierarchy

#### Instructions

#### Hypothes.is

1. **Identify** what you want tagged based on topics, themes, keywords, source types.
2. **Create** a text document to list tags.
3. **Write** down list of tags based on identified subjects.
4. **Save** text document list of tags

### Highlight

#### Instructions

#### Hypothes.is

1. **Go to** webpage or open a local file in a browser to highlight.
2. **Click** on Hypothes.is icon in browser toolbar or bookmarklet.
3. **Click** toggle or resize sidebar.
4. **Log** into your Hypothes.is account.
5. **Choose** whether you want the highlight to be public or in a private group.
6. **Select** text that you wish to highlight.
7. **Click** on the Highlight icon that appeals.

### Annotate

#### Instructions

#### Hypothes.is

1. **Go to** webpage or open a local file in a browser to annotate.
2. **Click** on Hypothes.is icon in browser toolbar or bookmarklet.
3. **Click** toggle or resize sidebar.
4. **Log** into your Hypothes.is account.
5. **Choose** whether you want the highlight to be public or in a private group.
6. **Select** text that you wish to annotate.
7. **Click** on the Annotate icon that appeals.
8. **Type** annotations in text box.
9. **Type** tags for the annotation.
10. **Choose** where to post the annotations (public or private group) and click.

## Generate API token

### Instructions

#### Hypothes.is

1. **Go to** Hypothes.is website.
2. **Log** into your Hypothes.is account.
3. **Click** on gear icon.
4. **Click** on 'Developer'.
5. **Click** Generate Your API token.
6. **Copy** token in text box for use.

## 5 Open Semantic Search

### 5.1 Setup

## Install VirtualBox

### Instructions

#### Open Semantic Search

1. **Double-click** on the VirtualBox.pkg installer file displayed in Install-Package folder on Desktop.
2. **Select** where to install Oracle VM VirtualBox.

## Install Open Semantic Search

### Instructions

#### Open Semantic Search

1. **Download** the virtual machine image Open Semantic Desktop Search.
2. **Find** Oracle VM VirtualBox icon in the "Applications" folder in the Finder.
3. **Start** VirtualBox.
4. **Go** into the menu "File" start the option "Import Appliance".
5. **Click** folder icon then choose the Open Semantic Desktop Search .ova file and select "Continue"
6. **Click** "Import" at the bottom of the pop-up screen.
7. **Edit** the settings of the new virtual machine (choose the virtual machine in the left sidebar and click the Settings button in the top bar).
8. **Go** to "Shared Folders" then click the Add Shared Folders icon.
9. **Click** on "Folder Path" then select folder.
10. **Activate** the option Auto-mount then click "Ok".

## 5.2 Using Open Semantic Search

### Load Open Semantic Search

#### Instructions

#### Open Semantic Search

1. **Start** VirtualBox if not open yet.
2. **Select** Open Semantic Desktop Search.
3. **Click** on Start Icon.

### Text search

#### Instructions

#### Open Semantic Search

1. **Enter** text into the Open Semantic Search interface.
2. **Click** search.
3. **Select** relevant filter in facets on the right navigation sidebar.

### Create tags

#### Instructions

#### Open Semantic Search

1. **Click** on Manage Structure in the topbar of the Open Semantic Search interface.
2. **Click** Add New Entry.
3. **Select** Tag as Facet.
4. **Type** name of tag in 'Label or name'.
5. **Save** tag.
6. **Return** to local host search home page.

### Tag documents

#### Instructions

#### Open Semantic Search

1. **Search** for document you wish to tag.
2. **Click** Tagging and annotation for this document in the search results.
3. **Tick** the checkbox of pre-existing tags.
4. **Click** save.
5. **Return** to local host search home page.

## Import from Hypothes.is

### Instructions

### Open Semantic Search

### Hypothes.is

1. **Repeat** previous instructions to find API token in Hypothes.is account.
2. **Don't** regenerate a new token.
3. **Copy** API Token.
4. **Open** loaded Open Semantic Search.
5. **Click** on Datasources in the topbar of the Open Semantic Search interface.
6. **Click** on Annotations (Hypothesis).
7. **Enter** copied API Token for Authorization.
